AH Clock

2 stickers

Ethernet cable

AH Table Stand

PoE injector

Package Contents

You provide

Optional

For more detailed installation instructions, see the Installation Manual. For easier installation you may consider optional AH Table Stand.

Quick connection

1 | Connect cables

Using a standard ethernet cable connect AH Clock to ethernet switch with PoE.

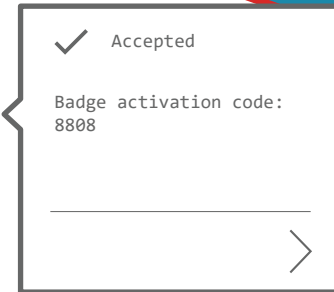

If your switch does not provide PoE, use a PoE injector (optional).

Assigning badges to employees

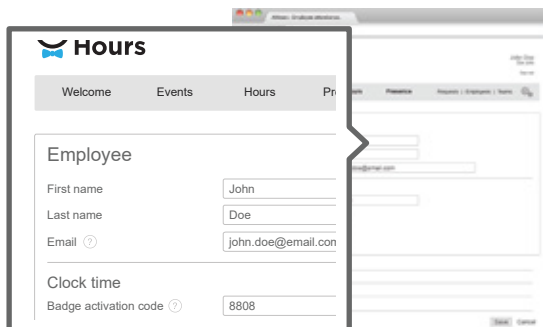

1 | Add new badge

Try to make a badge clocking by passing one of the badges by the terminal. Because user's card is not linked to an employee, badge activation info will be displayed.

2 | Activate the badge

Go to **allhours.com** (*Employee edit dialogue*) and enter the badge activation code to an employee. When saved, the link between card's number and user identification is created.

Registration code:
734878
Sign in to AllHours.com and register this device using the code above.

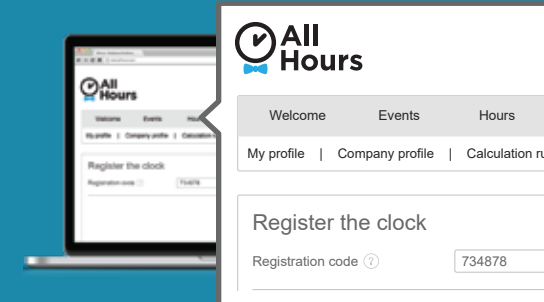

Device MAC address:
C4-F464-04-00-BF

2 | Power ON

When the AH Clock is properly powered, display and 4 buttons are illuminated. Once the clock is connected to internet, your **Registration code** will be displayed on the screen.

3 | Register

Go to **allhours.com** (*Settings > Registration points > Register new clock*) and use the **Registration code** to register the clock with your All Hours account.

4 | Congratulations, You're done!

Default screen in normal operation mode shows date/time information valid for linked All Hours account.

3 | Confirm new badge

After a successful badge activation make another clocking. Balance of hours will be displayed on the screen.
